

### **dairy cattle science animal pdf**

Dairy cattle (also called dairy cows) are cattle cows bred for the ability to produce large quantities of milk, from which dairy products are made. Dairy cows generally are of the species *Bos taurus*.. Historically, there was little distinction between dairy cattle and beef cattle, with the same stock often being used for both meat and milk production.. Today, the bovine industry is more ...

A growing number of consumers are ditching dairy products after learning that dairy is a slaughter industryâ€” with male calves born on dairy farms killed at a few days to a few months old for veal, and around one year of age for beef; and female cows typically slaughtered at 3 to 6 years of age, when their milk production declines. (A cowâ€™s natural lifespan is 20 years or more).

Contaminated semen transmitted Mycoplasma bovis infection into naive dairy herds, causing mastitis outbreaks.. The infection source was identified by epidemiological analysis and cgMLST analysis of M. bovis isolates.. The antibiotics used in semen extenders should be re-evaluated or tested M. bovis-free semen should be available.

Most know that the conditions for dairy cows on factory farms are cruel and inhumane in many ways. But how about the so-called humane alternatives? That's what everyone is asking about. With all the new humane claims and certifications on the market portraying a return to traditional dairy farming with cows grazing on beautiful green pastures, what does this best case scenario really look like?
